

Pool Cover For In-Ground POOL

IMPORTANT

Please read this manual before using the product, and keep the manual for reference. – If you have any questions about this product or face any issues when using it, feel free to contact us directly for answers and assistance. – Don't use the product in any ways that are not described in this manual. – Please inspect the product for premature wear or deterioration before use.

WARNING AVOID DROWNING RISK

1. Do not walk on the cover. This is not a safety cover and will not support weight.
2. Keep children away. Do not allow children or objects to remain under the cover as visibility is obstructed.
3. Regularly check the condition of the fabric for signs of sun or chemical damage like discoloration, brittleness, or broken hardware. These indicate the cover is no longer reliable.
4. Remove the cover completely before bathers enter the pool, as partial coverage can lead to entrapment.
5. Store the cover in its designated storage bag when not in use. Clean off any leaves or debris before storage.
6. Store the cover in a rodent-free area to prevent damage.
7. Never swim or use the pool while the cover is partially installed.

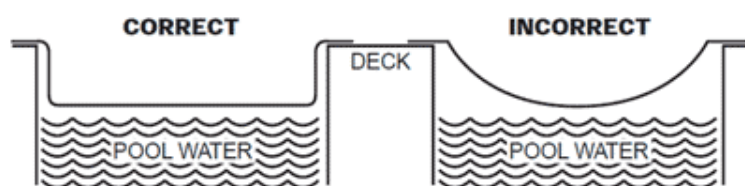

Ensure the cover is securely installed by following the installation instructions properly.

HOW TO INSTALL

Do not stretch the cover, and do not fix it tightly over the pool. It should rest on the water and be spread out evenly. Stretching the cover can damage it. The water level inside the pool should not be more than 12 inches below the deck for in-ground pools. If you're using a pool air pillow (sold separately; its function is to absorb pressure from water as the water freezes and expands), make sure to install the pillow at the center of your pool before covering it.

1

When your pool is ready for closing, spread the cover over the water and let it rest. The cover should touch the walls of the pool and the water, and the edges of the cover should stay outside the water and go over the deck. Do not stretch the cover or pull it tight.

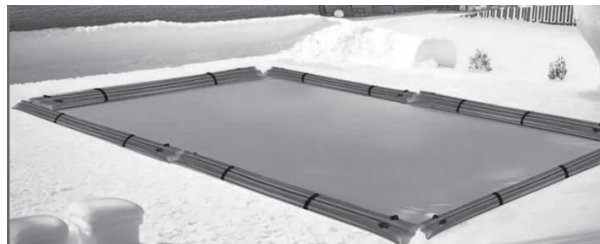

Note: Ensure that the pool cover does not come into contact with any sharp edges or other objects inside or around the pool that may damage it.

2

2. To secure the cover, use water tubes (sold separately) to press the edges of the cover tightly. Do not use sharp, hard, or heavy objects (such as bricks) to press down on the lid: such objects may damage the lid.

3

Make sure all edges of the cover are securely fastened to prevent it from being blown away by the wind. A small amount of water or snow on the cover will not damage it, so you don't always need to remove all the precipitation. This water or snow will act as a weight, keeping the cover in place.

Maintenance

1. Maintain the chemical balance of the pool water according to standard pool maintenance recommendations (appropriate pH, lime hardness, total alkalinity, and free chlorine content).
2. If any part of the pool cover freezes, do not attempt to remove the ice. Wait for the ice to melt before removing the pool cover.
3. After installation, the pool cover and weight tubes should not be exposed to heat sources, open flames, or flammable materials.
4. Clean the pool cover and weight tubes with a mild detergent and clean water; a brush may be used if necessary. After cleaning, allow the pool cover and weight tubes to dry completely before folding and storing.

Storage

1. Clean and dry the pool cover and weight tubes before storing.
2. Store in a dry, cool place.
3. Do not expose the pool cover or weight tubes to sharp objects to avoid tearing or other damage.
4. Keep away from heat sources and flammable materials.
