

Pool Cover Water Bags

Thank you for purchasing Uirway Pool Cover Water Bags, please read all manual instructions carefully before operation. This product ensures the pool cover is secure in winter and effectively prevents wind, sun, rain, dust, and debris from damaging it, thus avoiding wear and tear over time or use.

Safety Instructions

WARNING: Read this material before using this product. Failure to do so may result in serious injury.

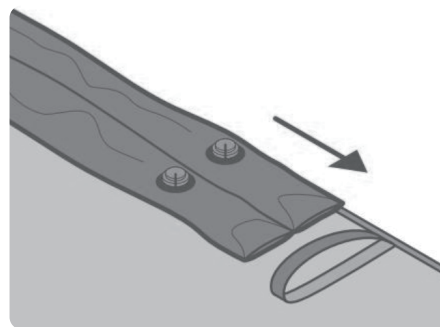

- This product is not a lifesaving device and should not be used as a flotation device.
- This product is not a toy; keep out of reach of children.
- A fully filled air hose is heavy; do not attempt to lift it from inside the hose.
- There is a tripping hazard; do not walk around the pool area where the air hose is installed.
- Do not step on the pool cover.
- Winter pool covers using the air hose are not safety covers.
- Simply fill it one-half to three-quarters full to allow for ice expansion, do not overfill with water.
- Do not step on or walk on the air hose.
- Inspect the product before and after each use.
- Do not use if the product is damaged or leaking.
- Before use, always move the connecting ring to the bottom of the spiral pattern, to prevent leaks.

Installation instructions

Note: Do not fill with water before installation.

1

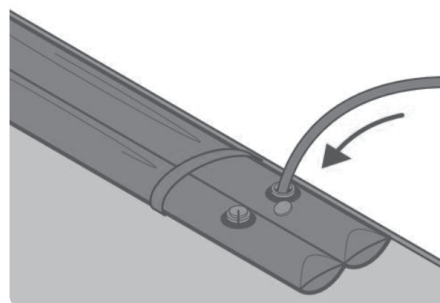

Once your in-ground pool is properly covered, insert the empty tubing into the special rings around the pool cover, laying it along the length and width of the pool, making sure the valve is facing upwards.

2

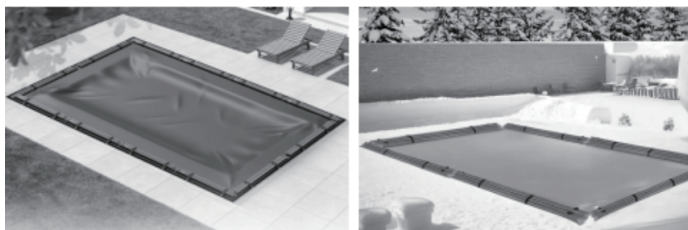

Fill the tubes with water using a hose to about 50% -75% of their full capacity.

Note: Please make sure not to fill the tube completely: the water inside will expand as it freezes, so it needs some extra room inside

3

Make sure the edges of the pool cover are firmly secured by the pipes so that the cover won't flutter in the wind.

Maintenance

1. Proper Filling Levels: Fill bags to about 50-75% capacity with your garden hose. Never fill them to the brim; ice expansion will cause the seams to split.
2. Leak Inspections: Periodically check for punctures—especially after high winds or harsh storms. Animals and freezing/thawing cycles can cause small tears.
3. Patching: use a heavy-duty Vinyl Repair Kit to patch minor pinpricks or tears.
4. End-of-Season Cleaning: When spring rolls around, rinse the bags with mild soapy water and a soft brush to remove dirt, mildew, and chemical residue.

Storage

1. Dry Storage: Clean and dry the pool cover tubes before folding them up for storage.
2. Store in a dry, cool place. Folding them wet promotes mold and material degradation.
3. Do not expose the pool cover tubes to sharp objects that can cause tears or other damage to them.
4. Pest Control: Store the deflated bags in a cool, enclosed area (like a storage bin) so rodents do not chew on the soft vinyl. When to Replace Bags
